DIRECT IMAGERS

Ledia 6 Twin

Most productive & cost-effective direct imaging solution on the market

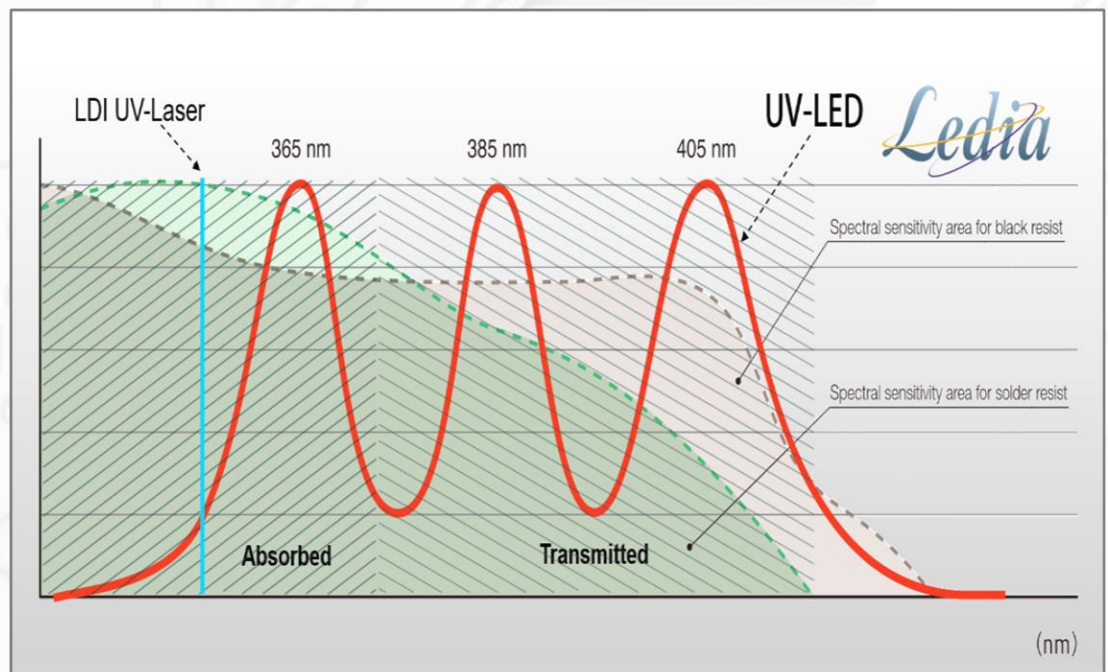

- Double stages = 150% productivity
- Highest productivity for resist
- Highest productivity for solder mask
- New high power 3 wavelength optics
- New very fast wide-scan registration system
- Low operational cost
- Integration into any CAM environment
- Compact external automation
- Field proven, 800+ installations in production

Highest productivity for solder mask

UV-LED technology in combination with **broad multi wavelength** enables highest throughput with the highest quality for your solder mask applications. The different wavelengths have peaks in both the absorbed and the transmitted wavelength areas of the spectrum of the solder mask inks. Due to this the polymerization happens at the top as well as the bottom of the solder mask layer, resulting in a fully polymerized layer with optimal adhesion to the substrate.

New high power 3 wavelength optics

We have applied proprietary technology to combine multiple UV-LED light wavelengths and used this as the light source in the Ledia direct imaging system. The adoption of a new 365, 385 and 405 nm three wavelength optics further expands the wave-length band for exposure and allows more energy to diffuse through the resist film from top to bottom. In addition to providing higher sensitivity, this helps to produce more satisfactory exposure results for resists, from general purpose dry film to solder with up to 50% higher throughput.

Field proven, 800+ installations

Ledia 6 is the sixth generation of direct imaging systems manufactured by SCREEN PE Solutions Co. Ltd from Japan, who is known for its outstanding and reliable high quality products. There are already more than 800 installations in daily operation and is as such field proven technology.

Low operational cost

The adoption of UV-LED technology as a light source results in a considerable lower consumable cost compared to conventional laser direct imaging systems. Also the LED's are only active when physically imaging panels, resulting in an even longer life time.

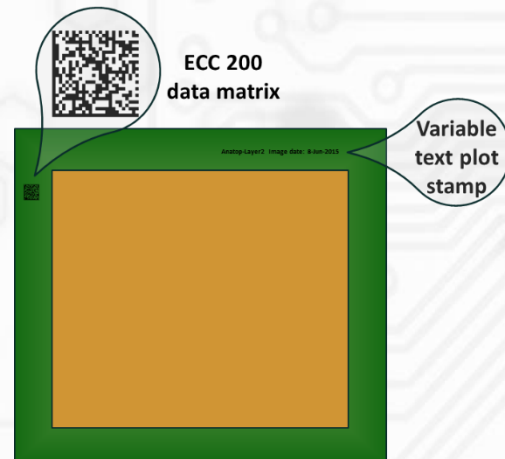

Sales and support by Ucamco

Sales is done by our European network of agents. Support is done by our own highly skilled local European service engineers who are known for their dedicated customer support either on-site or by means of remote-diagnostics. With our call-center and local spare part stock located in Belgium we provide support in your local language and can deliver parts within 24-hours.

Integration into any environment

Ucamco has a long-standing cooperation with SCREEN PE Solutions Co. Ltd as developer and supplier of its direct imaging front-end system based on **UCAM** and marketed as CU-9000. As such we can guarantee a perfect integration into any CAM environment with optimum support for the various input formats.

We can also provide a fully automated integration with support for all plot stamps and serialization.

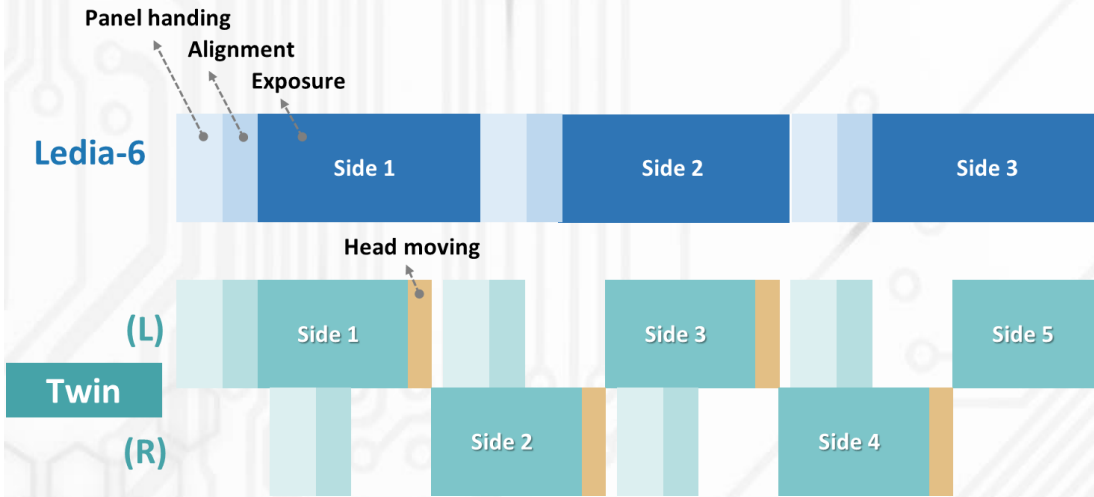

Multi wavelength for superb quality

The combination of different wavelengths allows all types of resists to be imaged using an optimal output ratio by means of wavelength modulation. Compared to a standard direct imaging system, the Ledia enables manufacturers to pursue even higher imaging quality. The achievement of world-leading product quality is also supported by many cutting-edge technologies, including a high-precision auto-focus function and alignment algorithm that compensate for various types of substrate distortion.

Effect of wavelength mix on cross-section shape

Productivity

Models overview

	Ledia-6S Twin SD-53	Ledia-6S Twin SD-63
Light source	UV-LED	
Wavelength	350~440nm (Peaks: 365nm, 385nm, 405nm)	
Max panel size	622x724 mm	
Max exposure size	5-head: 540x724 mm	6-head: 622x724 mm
Address pitch (resolution)	2.5 μ m (10.160 ppi)	
Min L/S	30 μ m	
Positioning accuracy (registration accy)	\pm 10 μ m (3 σ)	
Repeatability	\pm 5 μ m	
L/S accuracy	10% or \pm 2.5 μ m

New ground-breaking CAM Software

- For Rigid, Flex and HDI PCBs
- Wait times on complex algorithms slashed by up to 80% (8-core)
- State-of-the-art intuitive user interface
- Top-notch performance by using parallel processing on today's multicore processors
